

Sport Surfaces

Recycled tires are progressively finding their way into a variety of sports surfacing products, from indoor flooring applications to tennis courts and running tracks. These products are proving to be more and more competitive with their traditional counterparts as their potential benefits extend beyond cost effectiveness into enhanced performance and durability.

Product benefits may include:

- Durable and resilient surface
- Performs in all climates
- Easy maintenance and installation
- Slip resistant and traction in both wet and dry conditions
- Enhanced cushioning and comfort walking or running
- Enhanced performance as shock absorption reduces stress on joints, muscles, legs and back
- Enhanced safety and reduced injuries from falls
- Absorbs sound
